

How I structure and deliver projects

Think Plan Do

A simple framework I use to turn an objective into structured delivery.

Think before you start · plan before you act · check before you close

Example: deliver a customer-facing web service

Objective Launch a simple online service and validate real user demand.

Resources 8 weeks, defined budget, hosting, domain, content, delivery capacity.

Done Service is live, first users onboarded, successful transactions completed.

Risks Scope creep, unclear ownership, delivery delay, technical issues, weak adoption.

Scope Core features only. No mobile app, no advanced reporting in phase 1.

Plan Define scope → assign roles → prepare → build → test → launch → review.

People Owner sets priorities, delivery lead coordinates, developer builds, operations supports.

Check & close Confirm objectives met, review feedback, document lessons learned, decide the next phase.
